

ALI LADDER SAFETY TRAINING DVD ORDER FORM

For more information, please visit www.LadderSafetyTraining.org

Single & Extension Ladder Safety Training

The Single Ladder is a non-self-supporting portable ladder that is non-adjustable in length, consisting of one section. It is intended for use by one person. Single Ladders rated for heavy-duty or extra heavy-duty service range in length up to 30 feet as measured along the side rail. Single Ladders rated for medium-duty service are available in lengths up to 24 feet, and those rated for light-duty service do not exceed 16 feet in length.

The Extension Ladder is a non-self-supporting portable ladder that is adjustable in length. It consists of two or more sections that travel in guides or brackets so arranged so as to permit length adjustment. It is intended for use by one person. Extension Ladders are built with either two or three adjustable telescopic sections. The maximum extended length is dependant upon the number of sections as well as the duty rating of the ladder.

Step Ladder Safety Training

The Stepladder is a self-supporting portable ladder that is non-adjustable in length, with flat steps and a hinged design for ease of storage. It is intended for use by one person. Stepladders range in size from 3 ft. to 20 ft in length along the side rail. Stepladders shorter than 3 ft are considered Step Stools. The highest standing level on a stepladder is slightly more than 2 ft from the top of the ladder. The highest standing level is required to be marked on the specifications label on the side rail of the product. Therefore, when planning your job, the maximum work height is established by adding the user's height and reach to the highest standing level of the stepladder.

Articulated Ladder Safety Training

An Articulated Ladder is a portable ladder with one or more pairs of locking hinges which allow the ladder to be set up in several configurations such as a single or extension ladder, with or without a stand-off, a stepladder, a trestle ladder, scaffold or work table. Each pair of articulated joints in the ladder can be locked in one or more positions to accommodate the various configurations. The locking positions of the hinges allow set-up at the proper angles to accommodate each configuration that the manufacturer has designated.
